

OPTICOTE[™] fog free

Maintaining your focus on safety is easier when you're not walking around **in a fog.**

More than any other sense, you depend on your vision to keep you safe from hazards in the workplace - and you depend on industrial eyewear to protect your vision. Put simply: **when your vision is compromised, your safety is in jeopardy.**

Goggles and safety glasses are tools designed to protect our vision and our safety - but they can instantly become blindfolds when sudden changes in temperature or humidity render them opaque with fog and condensation. **Fog Free from Opticote** eliminates this problem with stunning results and leaves the wearer with uncompromised vision in even the most extreme fog-inducing conditions.

Fog Free is a thermally-cured coating that is unlike any other coating available in the marketplace. It can be successfully applied to un-cut lenses that are plastic, polycarbonate, Trivex®, high-index, polarized, Transitions®, or DriveWear® - prescription or non-prescription. And while **Fog Free** is an exceptionally cost-effective addition to your workplace safety toolset, its value becomes even more significant when weighed against the significant costs associated with lost time, damage to materials, and worker injuries.

We invite you to experience the unbelievable performance of Fog Free.

“

Fogging of eyewear has been an ongoing problem, but based on the trials performed by our safety department, Opticote's product performed the best.
